

## Emergency parachute systems

- High reliability
- Easiness of operation
- Long service life

Emergency parachute systems are effective means of pilots rescue in emergency situations.

FSUE "NII parachutostroyeniya" develops and manufactures emergency parachute systems for all types of Russian aircrafts.

Our Institute has high-qualified personnel, scientific, manufacturing and test facilities, which gives evidence of high level of design, tests and manufacturing of emergency parachute systems.

### Emergency parachute systems of autonomous leaving

Type of parachute systems	Maximum aircraft velocity, km/h	Maximum altitude, m	Life-preserving device
C-5K, ser.2	600	12000	ПЧ-1, Комар-2МП
C-5И, ser.2	600	12000	НАЗ-7М
C-4У, ser.2	400	4000	ПЧ-1,Р-855

### Emergency parachute systems for ejection seats

Type of parachute systems	Ejections seat type
ПС-М of all series	КМ-1
ПСУ-36 of all series	К-36

FSUE "NII parachutostroyeniya" proposes cooperation with you in developing, modification and manufacturing of emergency parachute systems.

Cooperation with us will allow you to solve the following problems:

- Prolongation of service life of the parachute systems;
- Replacement of the materials;
- Adjustment of parachute systems to the other objects.
